

Ca-Mg

HIGH PERFORMANCE. HIGH TECHNOLOGY. HIGH QUALITY.

HI-Q Range is a complete range of innovative solutions combining our Plant Stimulating Peptides and a high content of micronutrients, for a strong nutritional and biostimulant action.

The presence of PSP, coming from the Vegetal Protein Hydrolysates (VPH), improves the ability of plants to absorb nutrients in order to better prevent or cure nutritional deficiencies and disorders.

All **HI-Q** solutions are to be applied foliar, so that the action is even quicker and effective.

HI-Q Ca-Mg is fast acting and effective thanks to:

CALCIUM: prevents deficiencies (eg. Bitter pit of the apple, blossom-end rot of tomatoes, desiccation of the spine in grapevine, tip burn of lettuce etc...).

MAGNESIUM: stimulates the formation of chlorophyll and improves the photosynthetic activity.

COMPOSITION

Nitrogen (N) total	8% (112 g/L)
> Organic nitrogen (N)	1% (14 g/L)
> Nitric Nitrogen (N)	7% (98 g/L)
Calcium oxide (CaO) water soluble	8% (112 g/L)
Magnesium oxide (MgO) water soluble	4% (56 g/L)
VPH (vegetal protein hydrolysates)	20% (280 g/L)
pH (1:5)	3,8
Specific weight	1,40 kg/L

ADVANTAGES

- Strong nutritional and biostimulant action
- It increases the nutritional balance in order to obtain a better quality of the yield
- It prevents and cure Calcium physiological disorders and Magnesium deficiencies
- It improves nutrient use efficiency
- Improvement of the photosynthetic activity
- Stimulation of the formation of chlorophyll

CE

Hello
NATURE®

PLANT STIMULATING PEPTIDES INSIDE

HELLO NATURE pioneer in new biotechnologies, has developed a unique production process based on Vegetal Protein Hydrolysates (VPH) and resulting in Plant Stimulating Peptides (PSP).

-100 % vegetal origin

-Prominent, assured and natural biostimulant effect

-No-GMO, and safe product for crops and humans (low salinity, no antibiotics nor heavy metals)

- Improvement of quality traits
- Enhancement of nutrient uptake and assimilation
- Increase of stress resistance of the plant

← **Activation of cell response**

USE AND DOSE

All dosages provided are in standard conditions, dosages and modes of application are to be determined on the basis of the requirements and the nutritional status of the crop.

We recommend the application in the coolest hours of the day (morning or evening) to obtain maximum absorption by the leaves and the best effectiveness.

HI-Q Range can be mixed with the most common phytosanitary products and fertilizers on the market. Before using we recommend testing on a small surface for compatibility with other products.

Liquid fertilizer for foliar application (on leaves).

Crops	Application rate	Application stage	Number of applications
Vegetables, ornamental, medicinal and aromatic crops	2 - 3L/Ha	From fruit enlargement	2 to 3 applications
Woody Perennials (grape, berries, fruit trees...)	2 - 3L/Ha	Post fruit setting	3 to 5 applications

PACKAGING

1 – 5 – 20 L and 1000 L IBC
